Exploring Computer Science #17

Crash Course #14

Data Structures

1. How do you want to store your data?
2. What is one of the most basic data structures?
3. What is the term for a specific position in a data array?
4. What is the FIRST number in a data array called?
5. How can you store non-numerical data in an array?
6. What is the term used in computers for joining text together?
7. What is a 2D storage method for programming data?
8. What is a data structure that contains groups of different types of data?
9. What are LIFO and FIFO? What in computer science references them?
